Charcoal Pencil Kit

The main raw material of charcoal pen is charcoal powder. Charcoal is produced by incomplete combustion of wood. Some charcoal pens have the ocher brown of charcoal, generally black. The surface of the charcoal is relatively rough and non-reflective. It is more suitable for drawing astringent lines. The line has a strong sense of strength and can also wipe out different texture effects, so the charcoal is very expressive.

Soft Charcoal Pencil

The black and white transition is delicate and layered, and it is mostly used for pre-printing and coloring

Medium Charcoal Pencil

According to the overall layout of the picture, it is suitable for the early and mid-term use of painting

Hard Charcoal Pencil

Mostly used for bright surface treatment, line contour, detail shaping
